Notes: In 2018, we switch from UN-Habitat to WDI. WDI derives its data from UN-Habitat, yet for some reason reports more and sometimes different numbers. Moreover, WDI reports numbers for rich countries in 2018. So the 2018 population-weighted averages for Rest of Non-Arab World in particular are not comparable to the earlier numbers.

If we use the same countries to compute the population-weighted averages in 2005 as in 1990, the 1990-2005 changes for rest of non-Arab world and Latin America will be -14.1 and -10.3, respectively. Due to rounding errors, some "change" column figures may appear to be inconsistent with the other figures in corresponding table rows.

The population-weighted averages for the Arab country groups in each year include the countries for which data are shown in the table. The population-weighted averages for each non-Arab country group in 1990 include the countries listed below. The excluded countries were missing data.
