

## List of illustrations

- 1.1The Robinson Crusoe economy: efficient allocation.page 11
- 1.2The Robinson Crusoe economy: equilibrium and disequilibrium.15
- 1.3The Edgeworth box.21
- 1.4The Edgeworth box: bargaining and allocation.23
- 1.5The Edgeworth box: efficient allocation and the contract curve.26
- 1.6The Edgeworth box: disequilibrium.28
- 1.7The Edgeworth box: general equilibrium.28
- 1.8A two-good economy: general equilibrium in production and distribution.30
- 2.1A vector in  $\mathbf{R}^2$ .47
- 2.2Vector addition.48
- 2.3Convex and nonconvex sets.56
- 2.4The Brouwer Fixed-Point Theorem in  $\mathbf{R}$ .57
- 2.5An admissibly labeled simplicial subdivision of a simplex.59
- 2.6Sperner's Lemma for  $N = 1$ .60
- 2.7Bounding and separating hyperplanes for convex sets.65
- 4.1 $\mathcal{Y}^j$ : Technology set of firm  $j$ .74
- 4.2Convex and nonconvex technology sets.76
- 5.1Lexicographic preferences.83
- 5.2Constructing the utility function.86
- 7.1Mapping from  $P$  into  $P$ .102
- 8.1Bounding firm  $j$ 's production technology.116
- 9.1Household  $i$ 's budget sets and demand functions.124
- 11.1The Uzawa Equivalence Theorem.137
- 12.1Supporting an efficient allocation (Theorem 12.2).147
- 14.1Core convergence (Theorem 14.2).167
- 14.2Nonconvex preferences (Exercise 14.5).172
- 15.1Uncertain states of the world: An event tree.185

- G.1 Linear production technology and its supply correspondence. 198
- G.2 Preferences for perfect substitutes and the demand correspondence. 199
- G.3 Equilibrium in a market with supply and demand correspondences. 200
- 16.1 A typical correspondence,  $\varphi(x) = \{y \mid x - 1 \leq y \leq x + 1\}$ . 202
- 16.2 Example 16.1 – An upper hemicontinuous correspondence. 203
- 16.3 Example 16.2 – A correspondence that is not upper hemicontinuous at 0. 204
- 16.4 Example 16.3 – A lower hemicontinuous correspondence. 205
- 16.5 Example 16.5 – A continuous correspondence. 206
- 16.6 The Maximum Problem. 208
- 16.7 An upper hemicontinuous mapping from an interval (1-simplex) into itself without a fixed point. 210
- 16.8 An upper hemicontinuous convex-valued mapping from an interval (1-simplex) into itself with a fixed point. 210
- 16.9 Lemma 16.2 – Approximating an upper hemicontinuous convex-valued correspondence by a continuous function. 211
- 16.10 Example 16.7 – Applying the Kakutani Fixed-Point Theorem. 213
- 17.1 Example 17.1 – An upper hemicontinuous, convex-valued supply correspondence. 217
- 17.2 Example 17.2 – an upper hemicontinuous supply correspondence that is not convex-valued. 218
- 17.3 Theorem 17.2 – continuity of the budget set showing the construction of  $y^v$ . 223
